“ Ceramica Rondine ha lanciato per prima sul mercato il gres porcellanato effetto mattone. Brick Generation, è una perfetta sintesi di contemporaneità e fascino atemporale. Parliamo infatti di un rivestimento che riproduce con impressionante fedeltà la superficie e la resa tattile del mattone. La sua ruvidità, un'intensità materica senza precedenti, viene proposta e declinata in un'ampia tavolozza cromatica che fa rivivere l'affascinante essenza del mattoncino. Affidarsi alla personalizzazione degli spazi in ottica brick ci consente poi di giocare con pochi e semplici oggetti per mettere a punto un look 100% urban. ”

*Ceramica Rondine has developed a new collection: Brick Generation, a perfect blend of contemporary style and timeless appeal. We're looking at a wall covering able to offer an impressively accurate reproduction of the surface and the feel of brick. The rough texture, of an unprecedented material intensity, comes in a wide variety of shades brings the marvellous essence of brick right back to life. This focus on bringing a personal touch to settings with a brickwork twist allows us to experiment with a few simple objects to create a 100% urban look.*

*Ceramica Rondine propose une nouvelle collection qui s'appelle Brick Generation et qui est une synthèse parfaite entre contemporanéité et charme atemporel. Nous parlons en effet d'un revêtement qui reproduit, avec une fidélité impressionnante, la surface et le résultat tactile de la brique. Sa rugosité, une intensité matiériste sans précédents, est proposée et déclinée dans une vaste palette chromatique qui fait revivre la fascinante essence de la brique. S'en remettre à la personnalisation des espaces dans une optique de 'briques' nous permet aussi de jouer avec quelques objets simples afin d'élaborer un look 100% urbain.*

*Ceramica Rondine hat eine neue Kollektion entwickelt: sie heißt Brick Generation und ist eine perfekte Verbindung aus Zeitgemäßheit und zeitloser Faszination. So sprechen wir von einer Verkleidung, die die Oberfläche und die Beschaffenheit von Ziegel bei der Berührung mit erstaunlicher Wirklichkeitstreue nachahmt. Ihre Rauheit, eine beispiellose intensive Beschaffenheit, wird in einer breiten Farbpalette angeboten und ausgearbeitet das faszinierende Wesen des Ziegelsteins nacherleben lässt. Indem wir uns der persönlichen Gestaltung der Räume mit der Brick-Optik anvertrauen, erhalten wir die Möglichkeit, danach mit einigen wenigen einfachen Gegenständen zu spielen, um einen 100%-Urban-Look zu perfektionieren.*

// Il rivestimento 3D riporta sul gres porcellanato cubi di pietra o assi di legno su più livelli, capaci di creare diverse impressioni di profondità e ritmare le pareti con un piacevole effetto tridimensionale. Frutto della sofisticata tecnologia "tile detector", che permette di fotografare e comunicare alla macchina digitale l'esatta scansione grafica che si desidera riprodurre, il rivestimento 3D vanta una sorprendente fedeltà mimetica e una resa materica tattile e d'impatto. Suggestiva per la zona living, originale per gli ambienti bagno e il giusto mix tra ricercatezza e innovazione per spazi pubblici quali spa o esercizi commerciali: il rivestimento 3D si adatta in modo versatile ad ogni stile, necessità e destinazione d'uso anche in esterno, grazie alle caratteristiche tecniche superiori del gres porcellanato.

*The 3D wall covering features different levels of stone cubes or wooden planks on porcelain stoneware, creating different impressions of depth and re-create the walls with a pleasant three-dimensional effect. The result of the sophisticated "tile detector" technology, which allows photographing and communicating the exact graphic scan to be reproduced to the digital printer, the 3D wall covering boasts an amazing camouflage fidelity and a tactile and impact material yield. Suggestive for the living area, original for the bathroom and the right mix of sophistication and innovation for public spaces such as spas or shops: the 3D wall covering adapts in a versatile way to any style, need and intended use even outdoors, thanks to the superior technical characteristics of porcelain stoneware.*

*Le revêtement de mur 3D comporte différents niveaux de cubes de pierre ou de planches de bois sur le grès de porcelaine, créant différentes impressions de profondeur et recréant les murs avec un effet tridimensionnel agréable. Le résultat de la technologie sophistiquée de «détecteur de carreaux», qui permet de photographier et de communiquer le scan graphique exact à reproduire à l'imprimante numérique, le revêtement mural 3D offre une incroyable fidélité de camouflage et un rendement tactile et matériel. Suggestif pour le salon, original pour la salle de bain et le bon mélange de sophistication et d'innovation pour les espaces publics tels que les spas ou les magasins: le revêtement mural 3D s'adapte de manière polyvalente à tout style, besoin et utilisation, même à l'extérieur, grâce aux caractéristiques techniques supérieures du grès cérame.*

*Die 3D-Wandverkleidung weist auf das Feinsteinzeug verschiedene Ebenen von Steinwürfeln oder Holzbretter, die unterschiedliche Tiefeneindrücke erzeugen auf und die Wände mit einem angenehmen dreidimensionalen Effekt nachbilden. Das Ergebnis der hochentwickelten "tile-dektor" -Technologie, die es ermöglicht, den genauen grafischen Scan auf dem digitalen Drucker zu reproduzieren, zeichnet sich durch eine erstaunliche Tarnungstreue und einen taktilen und schlagzähnen Materialertrag aus. Suggestiv für den Wohnbereich, originell für das Badezimmer und die richtige Mischung aus Raffinesse und Innovation für öffentliche Bereiche wie Wellness oder Shops: die 3D - Verblender passen sich dank der hervorragenden technische Eigenschaften von Feinsteinzeug jedem Stil, Bedarf und Verwendungszweck auch im Freien an.*

Data la struttura irregolare dei bordi della tavola, che richiama la manifattura artigianale del classico cotto fiorentino, per esaltare le qualità estetiche del prodotto, si consiglia una fuga minima di 4 mm.

Given the irregular structure of the edges of the tile, which recalls the traditional craftsmanship of the Florentine "Cotto", to enhance its aesthetic qualities, we recommend a minimum joint of 4 mm.

## Qualità e Sostenibilità Quality and Sustainability

Nel 2022, Italcer è stata riconosciuta al vertice della classifica, stilata dal Team Credit Suisse, Kon Group e Forbes, tra le 100 eccellenze italiane premiate al Sustainability Award 2022. Il riconoscimento è riservato alle aziende italiane che si sono contraddistinte maggiormente nell'affrontare le sfide odierne, quali l'emergenza climatica, le mutate esigenze dei dipendenti ed in generale le richieste dei molteplici stakeholder, trasformandole in un'occasione per esprimere innovazione, lungimiranza e proattività di crescita. Le aziende partecipanti sono state selezionate e valutate dagli organizzatori attraverso criteri in cui si teneva conto del rating ESG dell'azienda, emesso da Altis Università Cattolica e da Reprisk, a cui è stato attribuito il punteggio da parte di Altis, ed il controllo incrociato dei risultati attraverso gli indicatori di Reprisk. Ciò ha consentito agli organizzatori di selezionare le imprese che maggiormente si sono distinte e operano da anni per una produzione sostenibile.

ISO 17889-1:2021 Sostenibilità delle piastrelle di ceramica	CERTIFICATO N. 30634	La nuova norma definisce un sistema per la valutazione della sostenibilità delle piastrelle di ceramica durante tutto il loro ciclo di vita, utilizzando indicatori qualitativi e quantitativi per le prestazioni ambientali e per la responsabilità sociale ed economica relativa alla progettazione, produzione, installazione e utilizzo del prodotto. The new standard defines a system for assessing the sustainability of ceramic tiles throughout their life cycle, using qualitative and quantitative indicators for environmental performance and social and economic responsibility related to product design, production, installation and use.

Il termine del ciclo di vita del prodotto si ha con la demolizione delle piastrellature. I detriti provenienti dalla demolizione delle piastrellature sono rottami di materiali ceramici, dunque di materiali inerti (non reattivi, chimicamente e fisicamente stabili, resistenti ad esposizione prolungata anche a condizioni estreme dal punto di vista termico, idrometrico e chimico).  
 I detriti di demolizione di piastrellature possono essere collocati nell'ambiente senza rischi particolari, ed anche trovare impiego nella preparazione di sottofondi, etc.

The end of the life cycle of the product comes with the demolition of the tiling. Debris from the tiling demolition are scraps of ceramic tiles, therefore inert materials (non-reactive, chemically and physically stable, resistant to even prolonged exposure to extreme thermal, chemical and hydrometric conditions).  
 Debris from the demolition of ceramic tiles can be placed safely in the environment, and also can be used in the preparation of substrates, etc.

La fin du cycle de vie du produit est représenté par la démolition du carrelage. Les débris provenant de cette démolition sont des matériaux céramiques, donc des matériaux inertes (non réactifs, chimiquement et physiquement stables, résistants aux expositions prolongées, même à des conditions thermiques, hydrométriques et chimiques extrêmes).  
 Les débris de démolition en mosaïque peuvent être placés dans l'environnement sans risques particuliers et ils peuvent également être utilisés dans la préparation de sous-couches, etc.

Das Ende des Produktlebenszyklus ist der Abbruch der Fliesen. Die Bruchstücke von dem Abbruch der Fliesen sind Abfälle von Keramikmaterialien, also von inerten Materialien (nicht reaktiv, chemisch und physikalisch stabil, widerstandsfähig auch gegen längeres Belichtung unter extremen thermischen Bedingungen).  
 Die Abbruchreste können ohne besondere Risiken in die Umwelt verbracht und auch zur Vorbereitung von Substraten usw. verwendet werden.

Consigli di posa Laying recommendations

Per il rivestimento di pavimenti e pareti mediante formati con lato superiore a 60 cm, Ceramica Rondine raccomanda di affidarsi al distanziatore livellante proposto da Raimondi: Levelling System e Andalsystem che consente facilmente di:  
 • Rendere perfettamente planare la superficie posata  
 • Mantenere la posizione desiderata di ogni piastrella  
 • Ridurre i tempi di posa  
 I distanziatori livellanti per piastrelle, rappresentano un sistema che permette di ottenere pavimenti livellati con semplicità e rapidità.  
 Guarda il video dimostrativo sul canale Youtube di Ceramica Rondine: [www.youtube.com/user/Rondine-Group](http://www.youtube.com/user/Rondine-Group)

For flooring and wall cladding using formats with sides of over 60 cm, Ceramica Rondine recommends the use of Raimondi levelling spacers: Levelling System and Andalsystem which make it easy for you to:  
 • Ensure that the laid surface is entirely flat  
 • Maintain the desired position for each tile  
 • Reduce laying time  
 Levelling spacers for tiles enable you to create level flooring in a quick and easy way.  
 Take a look at the video on the Ceramica Rondine Youtube channel: [www.youtube.com/user/Rondine-Group](http://www.youtube.com/user/Rondine-Group)

Pour le revêtement de sols et murs à l'aide d'un carrelage dont un côté dépasse les 60 cm, Ceramica Rondine conseille d'utiliser les cales de nivellement proposées par Raimondi: Levelling System et Andalsystem qui permettent facilement de:  
 • Nivelier parfaitement la surface posée  
 • Conserver l'emplacement souhaité pour chaque carreau  
 • Réduire le temps de pose  
 Les cales de nivellement pour carreaux permettent d'obtenir des sols nivelés en toute simplicité et avec rapidité.

Zur Verkleidung von Fußböden und Wänden mit Formaten, deren obere Seite 60 cm misst, empfiehlt Ceramica Rondine die Nutzung von nivellierenden Abstandshaltern von Raimondi: Mit dem Levelling System und Andalsystem ist es möglich:  
 • die verlegte Oberfläche perfekt eben zu machen.  
 • die gewünschte Position jeder Fliese beizubehalten.  
 • die Verlegzeiten zu reduzieren.  
 Die nivellierenden Abstandshalter für Fliesen stellen ein einfaches und schnelles System dar, nivellierte Fußböden zu verlegen.  
 Sehen Sie sich das Demo-Video auf dem Youtube-Kanal von Ceramica Rondine an: [www.youtube.com/user/RondineGroup](http://www.youtube.com/user/RondineGroup)

Per i formati rettangolari, si consiglia una sfalsatura tra ciascuna piastrella non superiore a 6-10 cm.  
 Fuga consigliata: minimo 3 mm. per prodotti non rettificati; minimo 2 mm. per prodotti rettificati.

When laying, you are recommended not to stagger the rectangular tiles by more than 6-10 cm (2"-4").  
 Suggested joint: 3 mm minimum for non-rectified products; 2 mm minimum for rectified products.

Pose conseillée avec un décalage entre chaque listel non supérieur à environ 6-10 cm.  
 Joint conseillée: 3 mm minimum pour produits non rectifiés; 2 mm minimum pour produits rectifiés.

Wir empfehlen eine Verlegung mit einer Verschiebung zwischen den einzelnen Leisten von nicht mehr als ungefähr 6-10 cm.  
 Empfohlene Fuge: mindestens 3 mm für nicht rechtwinklig geschliffene Produkte; mindestens 2 mm für rechtwinklig geschliffene Produkte.

## CONSIGLI DI POSA E PULIZIA PER IL PRODOTTO CERAMICO DI CERAMICA RONDINE

### Premessa

La norma UNI EN 14411 - “Piastrelle di ceramica - definizione, classificazione, caratteristiche e marcatura” - si propone di definire e fornire i termini, i requisiti ed i criteri di contrassegno per le piastrelle di ceramica di Prima scelta. Italcer S.p.A. SB sulle proprie piastrelle esegue costantemente tutti i test previsti dalla norma succitata, avvalendosi di laboratori accreditati. Vengono, inoltre, attuate costantemente procedure interne per il controllo della qualità del prodotto.

### Posa

Il posatore sul cantiere prima della posa deve verificare il tono, il calibro, la scelta del materiale, mentre durante la posa deve prelevare sempre il materiale attingendo da più scatole per ottenere un mix cromatico ideale. Deve, altresì, verificare la congruità del prodotto anche per eventuali difetti già evidenti prima della posa, per i quali sono escluse le garanzie qualora la segnalazione avvenisse dopo la posa.

Il posatore deve utilizzare i collanti idonei per le varie destinazioni d’uso e seguire le indicazioni del produttore riportate sulle confezioni. Deve verificare attentamente che il sottofondo sia stabile, asciutto e maturo, non gelato e non eccessivamente caldo. Deve effettuare la spalmatura del collante a regola d’arte affinché non si creino vuoti tra piastrella e sottofondo.

Il posatore, in modo particolare per i prodotti con superfici levigate, satinate o lappate, deve stare attento a non segnare il materiale sulla superficie di utilizzo con matite (grafite) o pennarelli indelebili. Per realizzare i tagli e le sagomature richieste dalla Direzione dei Lavori, deve utilizzare appositi dischi diamantati e attrezzature specifiche, in particolar modo per il gres porcellanato. La dimensione della fuga tra le piastrelle può variare in funzione del formato che si utilizza, dell’angolazione della posa in ortogonale o in diagonale, e della destinazione d’uso. Si consiglia una fuga minima di 3 mm per i prodotti non rettificati e una fuga minima di 2 mm per i prodotti rettificati. La posa a correre dei formati rettangolari impone di sfalsare la piastrella di 6 cm e, comunque, mai più di 10 cm (Fig.1).

Negli ambienti di grande dimensione è necessario posizionare dei giunti di dilatazione con regolarità, mentre, per i piccoli ambienti è sufficiente lasciare un leggero stacco fra piastrellato e muri perimetrali, coperto poi dal battiscopa.

### Stuccatura e pulizia dopo posa

L’utilizzo di malte o riempitivi colorati con pigmenti deve essere fatto dopo aver eseguito una prova preliminare.

Per le superfici levigate, satinate o lappate del gres porcellanato, a causa della microporosità provocata dall’azione abrasiva delle mole durante il processo di lavorazione, non si possono usare malte o riempitivi colorati a contrasto (piastrelle bianche e stuccatura antracite, rossa...).

Con l’utilizzo di stucchi cementizi dopo la stuccatura delle piastrelle, a stucco ancora fresco, è necessario rimuovere immediatamente, in modo accurato con spugna e abbondante acqua lo stucco in eccesso. Tre/quattro giorni dopo la posa, ma non oltre 10 dopo la posa, eseguire la pulizia di fondo mediante l’utilizzo di acidi tamponati al fine di sciogliere ed asportare completamente tutti i residui di cantiere.

Altrettanto importante è risciacquare bene fin quando l’acqua di lavaggio risulti essere limpida. Utile è l’utilizzo di aspiratori per liquidi, con lo scopo di rimuovere l’acqua sporca di lavaggio, evitando di spostarla da una parte all’altra. Anche a fine cantiere il posatore deve lavare i pavimenti con soluzioni di acqua e acido tamponato per evitare che la rimozione inadeguata o tardiva dei residui della stuccatura utilizzata per le fughe, lasci aloni difficili da rimuovere.

Detergenti consigliati:

Keramet. .... MAPEI

Detrerdek. .... FILA

Deltaplus. .... Kerakoll

Solvacid. .... Geal

Cement remover. .... Faber Chimica

Seguire le precise indicazioni del produttore riportate sulle confezioni e attenersi rigorosamente alle modalità d’uso. Per l’impiego di tali prodotti, rivolgersi sempre a posatori esperti.

In caso di utilizzo di stucchi epossidici, il lavaggio deve essere eseguito il più rapidamente possibile con detergenti alcalini.

Detergenti consigliati:

Kerapoxy cleaner. .... Mapei

PS 87. .... Fila

Keragell eco. ....Kerakoll

Eposolu. ....Geal

Wax remover. .... Faber chimica

L’utilizzo di prodotti detergenti (tipo antiruggine) che spesso contengono acido fluoridrico danneggerebbe definitivamente la superficie di qualsiasi tipo di piastrella.

E' bene sapere, inoltre, che oltre il 90% delle contestazioni in cantiere è dovuto a un cattivo, o addirittura inesistente, lavaggio dopo posa.

Con un corretto lavaggio dopo posa si eliminano i residui di posa (malta, colla, vernice, sporco da cantiere di varia natura) e si rimuovono eventuali residui superficiali di sporco.

### Manutenzione ordinaria

Consigliamo di effettuare la pulizia giornaliera con un detergente neutro. Attenersi rigorosamente alle percentuali di diluizione consigliate sul flacone.

## INSTALLATION AND CLEANING TIPS FOR RONDINE CERAMIC TILES

### Foreword

The UNI EN 14411 standard - “Ceramic tiles - definition, classification, characteristics and marking” - aims to define and provide the terms, requirements and marking criteria for first choice ceramic tiles. Italcer S.p.A. SB constantly performs all the tests required by the above-mentioned standard on their tiles, using accredited laboratories. In addition, internal procedures for product quality control are constantly implemented.

### Installation

The installers on site before installation must check the shade, size and choice of material, while during installation they must always take material from several boxes to achieve an ideal colour mix. They must also check the adequacy of the product for any defects already evident before installation, for which guarantees are excluded if they are reported after installation.

The installers must use adhesives suitable for the various intended uses and follow the manufacturer’s instructions on the packaging. They must carefully check that the substrate is stable, dry and cured, not frozen and not excessively hot. The adhesive must be applied perfectly so that no gaps are created between tile and substrate.

The installers, especially for products with polished, satin-finished or lapped surfaces, must pay attention not to mark the material on the surface of use with pencils (graphite) or indelible markers. In order to carry out the cutting and shaping required by the works management, they must use special diamond discs and special tools, especially for porcelain stoneware.

The size of the joint between tiles may vary depending on the size being used, the angle of the installation at right angles or diagonally, and the intended use. We recommend a minimum joint of 3 mm for non-ground products and a minimum joint of 2 mm for ground products. In case of continuous installation of rectangular sizes, the tile must be staggered by 6 cm and never more than 10 cm (Fig. 1).

In large rooms it is necessary to place expansion joints regularly, while in small rooms it is sufficient to leave a slight clearance between tiled surface and perimeter walls, which is then covered by the skirting board.

### Grouting and cleaning after installation

The use of pigment-coloured grouts or fillers must be done after a preliminary test.

For polished, satin-finished or lapped porcelain stoneware surfaces, due to the microporosity caused by the abrasive action of the grinding wheels during processing, contrasting coloured grouts or fillers (white tiles and anthracite, red grout, etc.) cannot be used.

When using cement grout, after grouting the tiles, while the grout is still fresh, any excess must be removed immediately and thoroughly with a sponge and plenty of water. Three to four days after installation, but no later than 10 days, carry out background cleaning using buffered acids in order to dissolve and completely remove all building site residues.

It is equally important to rinse well until the washing water is clear. It is useful using liquid aspirators to remove dirty washing water and avoid moving it from one part to another. Even at the completion of the construction site, the installers must wash the floors with a solution of water and buffered acid to prevent inadequate or delayed removal of residues of the grout used for the joints from leaving halos that are difficult to remove.

Recommended detergents:

Detrerdek. .... FILA

Deltaplus. .... Kerakoll

Solvacid. .... Geal

Cement remover. .... Faber Chimica

Follow the precise manufacturer’s instructions on the packaging and strictly comply with the instructions for use. Always consult experienced installers when using these products.

When using epoxy grouts, washing should be carried out as quickly as possible with alkaline detergents.

Recommended detergents:

Kerapoxy cleaner. .... Mapei

PS 87. .... Fila

Keragell eco. ....Kerakoll

Eposolu. ....Geal

Wax remover. .... Faber Chimica

The use of cleaning products (such as rust inhibitors) that often contain hydrofluoric acid would permanently damage the surface of any type of tile.

It is also good to know that more than 90 per cent of site complaints are due to poor, or even non-existent, washing after installation.

Correct washing after installation removes laying residues (mortar, adhesive, paint, building site dirt of various kinds) and removes any surface dirt.

### Routine maintenance

We recommend daily cleaning with a neutral detergent. Strictly adhere to the dilution percentages recommended on the bottle.

## CONSEILS DE POSE ET D’ENTRETIEN POUR LE PRODUIT CÉRAMIQUE DE CERAMICA RONDINE

**Avant-propos**

La norme UNI EN 14411 - « Carreaux céramiques - définitions, classification, caractéristiques et marquage » - se propose de définir et fournir les termes, prescriptions et critères de marquage pour les carreaux de céramique de premier choix. Italcer S.p.A. SB effectue constamment tous les tests prévus par la norme susmentionnée sur ses carreaux en faisant appel à des laboratoires agréés. De plus, les procédures internes de contrôle de la qualité du produit sont également appliquées en permanence.

**Pose**

Sur le chantier, avant la pose, le poseur doit vérifier la teinte, la dimension et le choix du matériau. Pendant la pose, il doit prélever les dalles de plusieurs boîtes afin d’obtenir un mélange chromatique idéal. Il doit également vérifier l’intégrité du produit, également en ce qui concerne d’éventuels défauts déjà évidents avant la pose et pour lesquels la garantie est exclue si le signalement est formulé après la pose.

Le poseur doit utiliser une colle appropriée aux différentes destinations d’usage et suivre les indications du producteur présentes sur les emballages. Il doit attentivement vérifier que le support est stable, sec et en bon état, non gelé et non excessivement chaud. Il doit étaler la colle dans les règles de l’art afin de ne pas créer de bulles d’air entre le carreau et le support.

En particulier pour les produits avec des surfaces polies, satinées ou demi-polies, le poseur doit faire attention à ne pas marquer la surface visible du carreau avec des crayons (graphite) ou des feutres indélébiles. Pour les découpes et usinages demandés par le responsable des travaux, il doit utiliser des disques diamantés adaptés et des équipements spécifiques, en particulier pour le grès cérame.

La taille du joint entre les carreaux peut varier en fonction du format utilisé, du schéma de pose, orthogonal ou diagonal, et de la destination d’usage. Un joint minimum de 3 mm est conseillé pour les produits non rectifiés et 2 mm pour les produits rectifiés. La pose continue des formats rectangulaires impose de décaler le carreau de 6 cm et, en tout état de cause, jamais plus de 10 cm (fig. 1).

Dans les espaces de grandes dimensions, il est nécessaire de créer régulièrement des joints de dilatation alors que, pour les petites pièces, il suffit de laisser un petit espace entre la partie carrelée et les murs périmétriques, qui sera ensuite recouvert par la plinthe.

**Jointoiement et nettoyage après la pose**

Les mortiers ou produits de jointoiement colorés avec des pigments peuvent être utilisés uniquement après avoir effectué un essai préalable.

Pour les surfaces polies, satinées ou semi-polies en grès cérame, en raison de la microporosité due à l’action abrasive des meules pendant l’usinage, il n’est pas possible d’utiliser des mortiers ou produits de jointoiement colorés en contraste (carreaux blancs et joints anthracites, rouges...).

En cas d’utilisation de mortiers à base de ciment après le jointoiement des carreaux, lorsque le mortier est encore frais, il est nécessaire d’éliminer immédiatement soigneusement le mortier en excès avec une éponge et beaucoup d’eau. Trois/quatre jours après la pose, mais pas plus de 10 jours après, nettoyer à fond avec des tampons imbibés d’acide afin d’éliminer complètement tous les résidus.

Il est également important de rincer correctement jusqu’à ce que l’eau de lavage reste propre. L’utilisation d’aspirateurs pour liquides est préconisée afin de retirer l’eau sale de lavage et éviter de la déplacer d’une partie à l’autre de la pièce. Une fois le chantier terminé, le poseur doit laver les sols avec une solution d’eau et d’acide afin d’éviter que le nettoyage incorrect ou insuffisant des résidus du mortier utilisé pour les joints ne laisse des halos difficiles à éliminer.

Suivre les indications précises du producteur présentes sur les emballages et respecter rigoureusement le mode d’emploi. Pour l’utilisation de ces produits, s’adresser toujours à des poseurs qualifiés.

En cas d’utilisation de mortiers époxy, le lavage doit être effectué le plus rapidement possible avec des détergents alcalins.

L’utilisation de produits détergents (type antirouille), qui contiennent souvent de l’acide fluorhydrique, endommagerait irrémédiablement la surface de n’importe quel type de carreau.

Par ailleurs, il faut savoir que plus de 90 % des réclamations sur chantier sont dues à un lavage incorrect, voire à l’absence de lavage, après la pose.

Un lavage correct après la pose permet d’éliminer les résidus de pose (mortier, colle, peinture, saletés du chantier de natures diverses) ainsi que les éventuels résidus de saleté en surface.

## TIPPS ZUR VERLEGUNG UND REINIGUNG DER KERAMISCHEN PRODUKTE DER FIRMA RONDINE

**Vorbedingung**

Die Norm UNI EN 14411 - „Keramische Fliesen und Platten - Definition, Klassifizierung, Eigenschaften und Kennzeichnung“ - zielt darauf ab, die Begriffe, Anforderungen und Kennzeichnungskriterien für Keramikfliesen der ersten Sortierung zu definieren und bereitzustellen. Italcer S.p.A. SB führt ständig alle von der oben genannten Norm geforderten Tests an den produzierten Fliesen durch und lässt diese von akkreditierten Labors durchführen. Darüber hinaus werden ständig interne Verfahren zur Kontrolle der Produktqualität durchgeführt.

**Verlegung**

Der Verleger muss vor der Verlegung auf der Baustelle den Farbton, das Kaliber und die Auswahl des Materials prüfen, während er während der Verlegung immer Material aus mehreren Kartons nehmen muss, um eine ideale Farbmischung zu erzielen. Er muss auch die Angemessenheit des Produkts auf bereits vor der Verlegung offensichtliche Mängel prüfen, für die die Garantie ausgeschlossen ist, wenn sie nach der Verlegung gemeldet werden.

Der Verleger muss für die verschiedenen Zwecke geeignete Klebstoffe verwenden und die Anweisungen des Herstellers auf der Verpackung befolgen. Es muss sorgfältig geprüft werden, ob der Untergrund stabil, trocken und reif, nicht gefroren und nicht übermäßig heiß ist. Der Klebstoff muss fachgerecht aufgetragen werden, damit keine Fugen zwischen Fliese und Untergrund entstehen.

Der Verleger muss insbesondere bei Produkten mit polierten, satinierten oder geläppten Oberflächen darauf achten, dass er das Material nicht mit Bleistiften (Graphit) oder unauslöschlichen Markern auf der zu verwendenden Oberfläche markiert. Um die von der Werksleitung geforderten Schneide- und Formgebungsarbeiten durchführen zu können, müssen spezielle Diamantscheiben und besondere Geräte verwendet werden; dies gilt, insbesondere für Feinsteinzeug.

Die Fugenbreite zwischen den Fliesen kann je nach verwendetem Format, dem Verlegewinkel (rechtwinklig oder diagonal) und dem Verwendungszweck variieren. Wir empfehlen eine Mindestfugenbreite von 3 mm für nicht rektifizierte Produkte und eine Mindestfugenbreite von 2 mm für rektifizierte Produkte. Bei der Verlegung von rechteckigen Formaten müssen die Fliesen um mindestens 6 cm und höchstens 10 cm versetzt werden (Abb. 1).

In großen Räumen ist es notwendig, regelmäßig Dehnungsfugen anzubringen, während es in kleinen Räumen ausreicht, einen kleinen Spalt zwischen Fliesen und Außenwänden zu lassen, der dann von der Sockelleiste abgedeckt wird.

**Fugen und Reinigung nach der Verlegung**

Die Verwendung von pigmentgefärbten Mörteln oder Spachtelmassen muss nach einer Vorprüfung erfolgen

Für polierte, satinierte oder geläppte Feinsteinzeugoberflächen können aufgrund der Mikroporosität, die durch die abrasive Wirkung der Schleifscheiben während des Arbeitsprozesses entsteht, keine kontrastierenden farbigen Fugenmörtel oder Füllstoffe (weiße Fliesen und anthrazitfarbener, roter Fugenmörtel usw.) verwendet werden.

Bei der Verwendung von Zementmörtel nach dem Verfugen der Fliesen, muss überschüssiger Mörtel vor dem Austrocknen gründlich mit einem Schwamm und viel Wasser entfernt werden. Drei bis vier Tage nach der Verlegung, spätestens jedoch 10 Tage nach der Verlegung, ist eine Grundreinigung mit gepufferten Säuren durchzuführen, um alle Baustellenrückstände aufzulösen und vollständig zu entfernen.

Ebenso wichtig ist es, gut nachzuspülen, bis das Wasser klar ist. Nützlich ist der Einsatz von Flüssigkeitsaugern, um schmutziges Waschwasser zu entfernen und zu vermeiden, dass es von einem Teil zum anderen fließt. Sobald die Baustellenarbeiten beendet sind muss der Verleger die Böden mit einer Lösung aus Wasser und gepuffertes Säure abwaschen, um zu verhindern, dass die Rückstände des für die Fugen verwendeten Fugenmörtels unzureichend oder zu spät entfernt werden und schwer zu entfernende Fleckenschimmer hinterlassen.

Immer genau die Anweisungen des Herstellers auf der Verpackung verfolgen und die Gebrauchsanweisung beachten. Für die Verwendung dieser Produkte wende man sich immer an erfahrene Verleger.

Bei der Verwendung von Epoxid-Spachtelmassen sollte die Reinigung so schnell wie möglich mit alkalischen Reinigungsmitteln erfolgen.

Die Verwendung von Reinigungsmitteln (z. B. Rostschutzmittel), die häufig Flussssäure enthalten, würde die Oberfläche jeder Art von Fliesen dauerhaft beschädigen. Außerdem weisen wir darauf hin, dass mehr als 90 Prozent der Reklamationen auf der Baustelle auf mangelhaftes oder gar nicht vorhandenes Waschen nach dem Verlegen zurückzuführen sind. Mit einer korrekten Reinigung nach dem Verlegen werden alle Rückstände (Mörtel, Kleber, Farbe, Baustellenschmutz verschiedener Art) und jeglicher Oberflächenschmutz entfernt.
